Wooden Rope Joiner Usage Instructions

Light Pulls

For light pulls, use the rope joiner to join the ropes and use the rubber band to hold it in place when the ropes are slack.

Medium and Heavy Pulls

For medium and heavy pulls use the rope joiner to stop the ropes binding using the rubber band to keep the rope joiner in position when the ropes are slack. After the pull the rope joiner can be pushed or driven out from the ropes allowing the ropes to separate easily.
